

Core Java Syllabus

Overview:

Java programming language is developed by Sun Microsystems. Java is object oriented, platform independent, simple, secure, architectural-neutral, portable, robust, multi-threaded, high performance, distributed and dynamic. It can be used to develop software and also applets. A java program can run on various operating systems without rewriting the code. And this is possible because of java run-time environment which tells the operating system what to do by interpreting the java code.

Objective:

- ❖ To become familiar with the features of Java Language
- ❖ To discover how to write Java code according to Object-Oriented Programming principles.
- ❖ To become comfortable with concepts such as Classes, Objects, Inheritance, Polymorphism and Interfaces
- ❖ To learn Java APIs like Collections
- ❖ To develop Multithreaded and Networking applications.

Pre-requisite / Target Audience:

- ❖ C language skills (It's optional)
- ❖ This course is designed to meet the needs of those who want to be professional Java developers and Software Testing.
- ❖ This will also help the audience to get through the Java Programming Certification.

Module 1: Java Language Environment

In this Module you will learn what is a java, and its features, and why it is popular? Means by comparing the below of its features with other programming language's you will understand.

- ❖ Object Oriented
- ❖ Platform Independent
- ❖ Automatic Memory Management
- ❖ Compiled / Interpreted approach
- ❖ Robust
- ❖ Secure
- ❖ Dynamic Linking
- ❖ Multi-Threaded

Model 2: Java Fundamentals

In this module you will learn the basic structure of the programming and how to create your own structural code, and where to use it.

- ❖ Data types
- ❖ Operators
- ❖ Control Statements
- ❖ Arrays
- ❖ Enhanced for-loop
- ❖ Enumerated types,
- ❖ Static import
- ❖ Auto boxing
- ❖ Variable arguments

Module 3: Essentials of Object-Oriented Programming

In this module you will learn the basic definitions and uses and how to make our code in more structure way,so that anyone can understand our code, how to make it more easier.

- ❖ Object and Class Definition
- ❖ Using encapsulation to combine methods and data in a single class
- ❖ Inheritance and Polymorphism

Module 4: Writing Java Classes

In this module you will learn all the concepts Oops where we will use all these concepts in our daily way life by knowingly or unknowingly. By learning this module you can able to create a code in a standard format.

- ❖ Encapsulation
 - ❖ Polymorphism
 - ❖ Inheritance
 - ❖ OOP in Java
 - ❖ Class Fundamentals
 - ❖ Using Objects
 - ❖ Constructor
 - ❖ Garbage Collection
-

- ❖ Method Overloading
- ❖ Method Overriding
- ❖ Static Members
- ❖ Understanding Interface
- ❖ Using Interfaces

Module 5: Packages

In this module you will learn how to re-use/access our class files when it is in same package/different package/different project.

- ❖ Why packages
- ❖ Understanding Class path
- ❖ Access modifiers & their Scope

Module 6: Exception Handling

In this module you will learn how to handle our standalone applications/web applications, whenever there is an error occurs, how to tackle it, and where it is occurring, by learning this module you will get it.

- ❖ When an exception occurs.
- ❖ Importance of Exception Handling
- ❖ Exception Propagation
- ❖ Exception Types
- ❖ Using try and catch
- ❖ throw, throws, finally
- ❖ Writing User defined Exceptions

Module 7: Java Util Package / Collections Framework

In this module you will learn how to make/get our content in a user's prospective/his requirement, when it is in same file or it may be in a different file even if it is in different format.

- ❖ Collection & Iterator Interface
- ❖ Enumeration
- ❖ List and ArrayList
- ❖ Vector
- ❖ Comparator
- ❖ Set Interface & SortedSet
- ❖ Hashtable
- ❖ Properties

JDBC Syllabus

DataBase Programming language using JDBC

In this module you will learn how to make the connection from database to java application . our content in a user's prospective/his requirement.

- ❖ Introduction to JDBC
- ❖ JDBC Drivers & Architecture
- ❖ CRUD operation Using JDBC Connecting to non-conventional Databases
